Serious About The Future

What is Ice Station?

It's a fact that over 80% of the vehicles rolling off production lines today have Climate Control fitted as standard.

This is a great opportunity for independent workshops when it comes to servicing and re-gassing the air conditioning system.

Block Exemption legislation means you can service customer's cars without invalidating the warranties – but how many customers are aware of this? Are you missing out on a great opportunity to increase your business?

That's why Allparts has teamed up with leading manufacturers to provide the Ice Station programme. Ice Station not only provides you with the necessary equipment, technical information and training but also with creative marketing support and includes a wide range of off the shelf replacement spares and accessories.

Air Conditioning - Why bother?

There are over 4,000,000 vehicles reaching the age where their air conditioning systems need attention. This is a great opportunity and to ignore it or to leave it to what were considered specialist dealers and outlets means missing out on valuable additional sales and profit for your business.

It also means that there is a risk of losing other valuable custom if your business is unable to meet their expectations, as this is viewed increasingly as a service item.

To help you develop this opportunity Allparts offers two superb air conditioning packages that can be purchased or leased. Both include commissioning and on site training.

Training:

We offer two separate certified courses, each of two days duration. The cost of the course includes course notes, food and refreshments over the two days. It does not include any overnight accommodation that may be required.

Course 1

Vehicle Air Conditioning Systems

Aimed at the garage technician who has had no previous experience on such systems.

Course 2

Climate Control Systems

Aimed at garage technicians with an operating knowledge / experience of basic air conditioning systems.

Training courses are usually held at Robert Bosch Ltd. in Denham, Buckinghamshire. On successful completion of the course candidates will be certificated to prove competence in working on modern air conditioned vehicles.

Equipment:

ATC recommend the Texa Konfort 650 Evolution machine as the best value piece of equipment, and it is now available with two optional consumable kits:

Consumable Premium Package

This packages contains everything needed for comprehensive and professional air conditioning services. The Premium package includes:

Digital Thermometer	Spring Locks
PAO Oil	O-Ring Set
Autodata Chart	Valve Tool
Glo Leak	Sniffer
Ultra Violet Lamp	Nitrogen Regulator
R134a Gas	Low Pressure Tap

Consumable Plus Package

The Plus package is the Premium package without the sniffer, nitrogen regulator and low pressure tap.

Marketing Support:

Ice Station Pack

Our full point of sale and marketing support package has something for every business to take advantage of. We think it's important that your customers are aware of the latest service you can now provide.

Allparts Ice Station marketing support package does just that, with exterior wall banners, Air Conditioning service reminder sticker and reception wall signs. All serve as a reminder to the customer that "Yes, we service and repair Air Conditioned vehicles".

Products & Consumables:

Employing our own team of Air Conditioning product managers enables us to source replacement spares on a global basis, ensuring competitively priced parts without compromising on quality.

If you require a replacement compressor, condenser, receiver drier, or simply a bottle of R134a gas Allparts will endeavour to supply off the shelf and deliver the same day.

We also stock a full range of service products to complete our total Air Conditioning offer.

Supercool Service Products

TSI Supercool has been supplying air conditioning products to the automotive aftermarket since 1994. What sets TSI Supercool apart is that they formulate, test, and manufacture their own Supercool brand of Polyol Ester Oil, Technologically Advanced PAG Oil, A/C Flush, U/V Dye and Leak Stop to exacting ISO 9001 standards.

Supercool – trusted by professionals Worldwide!
